

TRUCK PIVOT JOINT BEARING AND METHOD OF LUBRICATING

ABSTRACT OF THE DISCLOSURE

5 A bearing assembly is disclosed having a pair of bearing members movable relative to one another. A space is defined between the bearing members, and a relatively thin coating of a greaseless, self-lubricating material is applied to the surface of at least one of the bearing members. A grease lubricant is disposed in the space defined between the bearing members such that both the grease lubricant and the greaseless material act to
10 substantially lower the friction-generated heat that is encountered during operation.
